

VERSATILITY MEETS AGILITY

D780

- 24.5mp BSI Sensor
- ISO 100 to 51,200
- 7fps Continuous Shooting w/ D5 AF Algorithm
- 51-Point AF System via Optical View Finder
- 273-Point Hybrid AF System in Live View
- Dual UHS-II SD Card Slots
- 4K UHD and Slow Motion Video
- 4K HLG & N-LOG External Recording
- 12fps Silent Live View Shooting
- 2260-shot battery life
- In-camera battery charging
- Snapbridge Connectivity

From sprawling landscapes to low-angle shots of a skateboarder in action, one can never cease to admire the awe-inspiring wonders of nature and life's astounding moments. Photographers and videographers alike will now be able to capture the best action in swift motion and never have the fear of missing out with the new D780. This latest model, succeeding the Nikon D750, delivers amazing refinements in image quality, performance and versatility.

The new D780 sets the standard for next-generation cameras featuring evolved autofocus (AF) system with easy-to-view optical view finder and high AF precision in low light situation. As a result, shooting with higher accuracy is achieved with no time lag and better clarity. The D780 is further complemented by NIKKOR's extensive selection of high-performance interchangeable F mount lenses along with improved battery life all condensed into a compact, high performing body.

D780

VERSATILITY MEETS AGILITY

Capture Subjects with Precision

For viewfinder shooting, the D780 uses a 51-point AF system, employing an algorithm from the Nikon D5 which delivers powerful focus acquisition and performance.

In Live View shooting, experience smoother and faster AF accuracy with the a Hybrid 273-point AF system which covers approximately 90% of the image area. Featuring adjustable focus speed & sensitivity, along with face and eye detection AF.

Perfect for subject acquisition during night shots and concerts, the D780 excels in low-light illumination AF detection down to -5.0 EV3 and -7.0 EV4. Swiftly capturing all the action in high-speed continuous shooting at up to approximately 7fps with both viewfinder shooting and live view photography using the mechanical shutter.

Expressive Movie Making Capabilities

Featuring a 24.5 megapixel back side illuminated sensor the D780 offers excellent low light sensitivity with an ISO range up to 51,200 and expandable up to 204,800.

The D780 also supports 4K UHD with full pixel readout, Full HD/120p recording allowing users to record movies that make the most of wide-angle lenses' and broad angles of view delivering edge to edge sharpness.

For the videographers and video creators, the D780 features 10-bit N-Log profile or the new HDR (HLG) profile for true-to-life movie output with HDMI 10-bit output. This HDR (HLG) picture profile supports instant HDR workflow which allows acquisition of rich tonal gradation movies without colour grading.

Ingenious operability and connectivity

The D780's touch-operable, tilting, high-resolution, approx. 2359k-dot, 3.2-in. monitor enables detailed confirmation of the subject during playback zoom.

Other significant D780 features include its energy saving design that supports longer shooting time, and a double memory card slot compatible with UHS II SD cards.

A new user interface with flexible and easy-to-see i menu is introduced similar to the Nikon Z-Series. These features enable users the ability to capture their creations with much ease and convenience.

The addition of Snapbridge connectivity adds seamless image transfer to smart device and remote operation of the camera in stills and video.
